

SMAP Validation and Standard Grid

Rajat Bindlish, Tom Jackson
(ARS USDA)

Steven Chan, Scott Dunbar, Andreas Colliander, Simon Yueh
(Jet Propulsion Laboratory, California Institute of Technology)

6th SMAP
Cal/Val
Workshop
September 1-3, 2015

Rationale

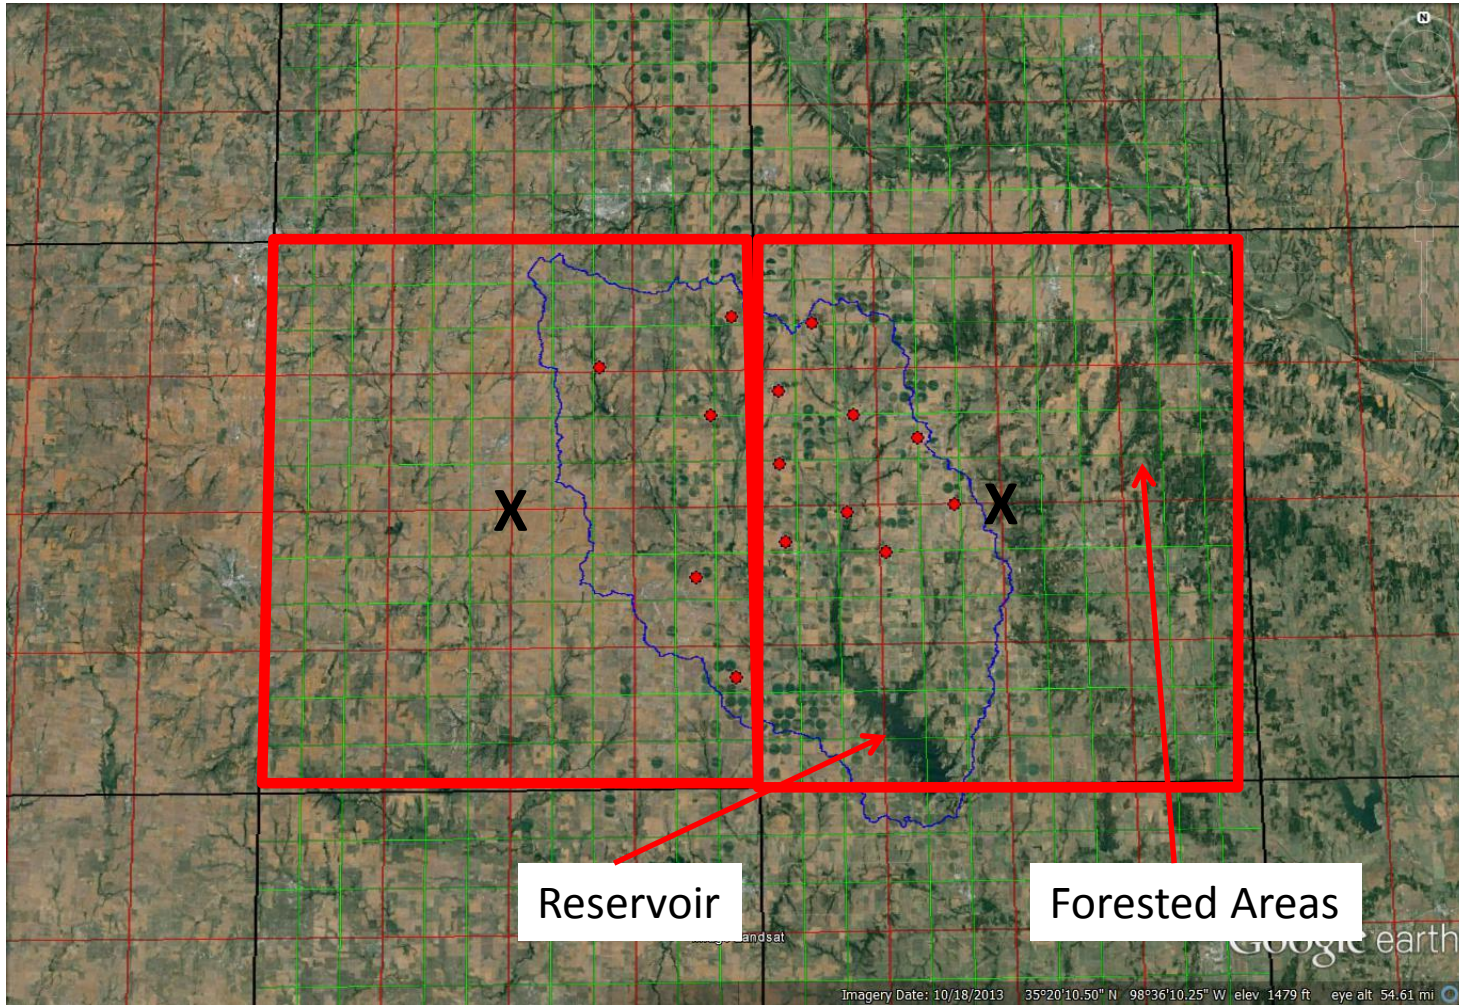

- Geo-location of the *in situ* data and SMAP data should be consistent with each other for validation
- SMAP data is on a fixed Earth grid (Ease2grid).
- *In situ* sensors are installed based on:
 - Location availability
 - Geographical considerations
 - Accessibility
 - Other factors
- Due to above factors there can be a geographical mismatch between the *in situ* observations and the SMAP grid

Fort Cobb Watershed

- 36 km EZZ
- 9 km EZZ
- 3 km EZZ
- FC watershed
- *In situ* sites

Fort Cobb Watershed

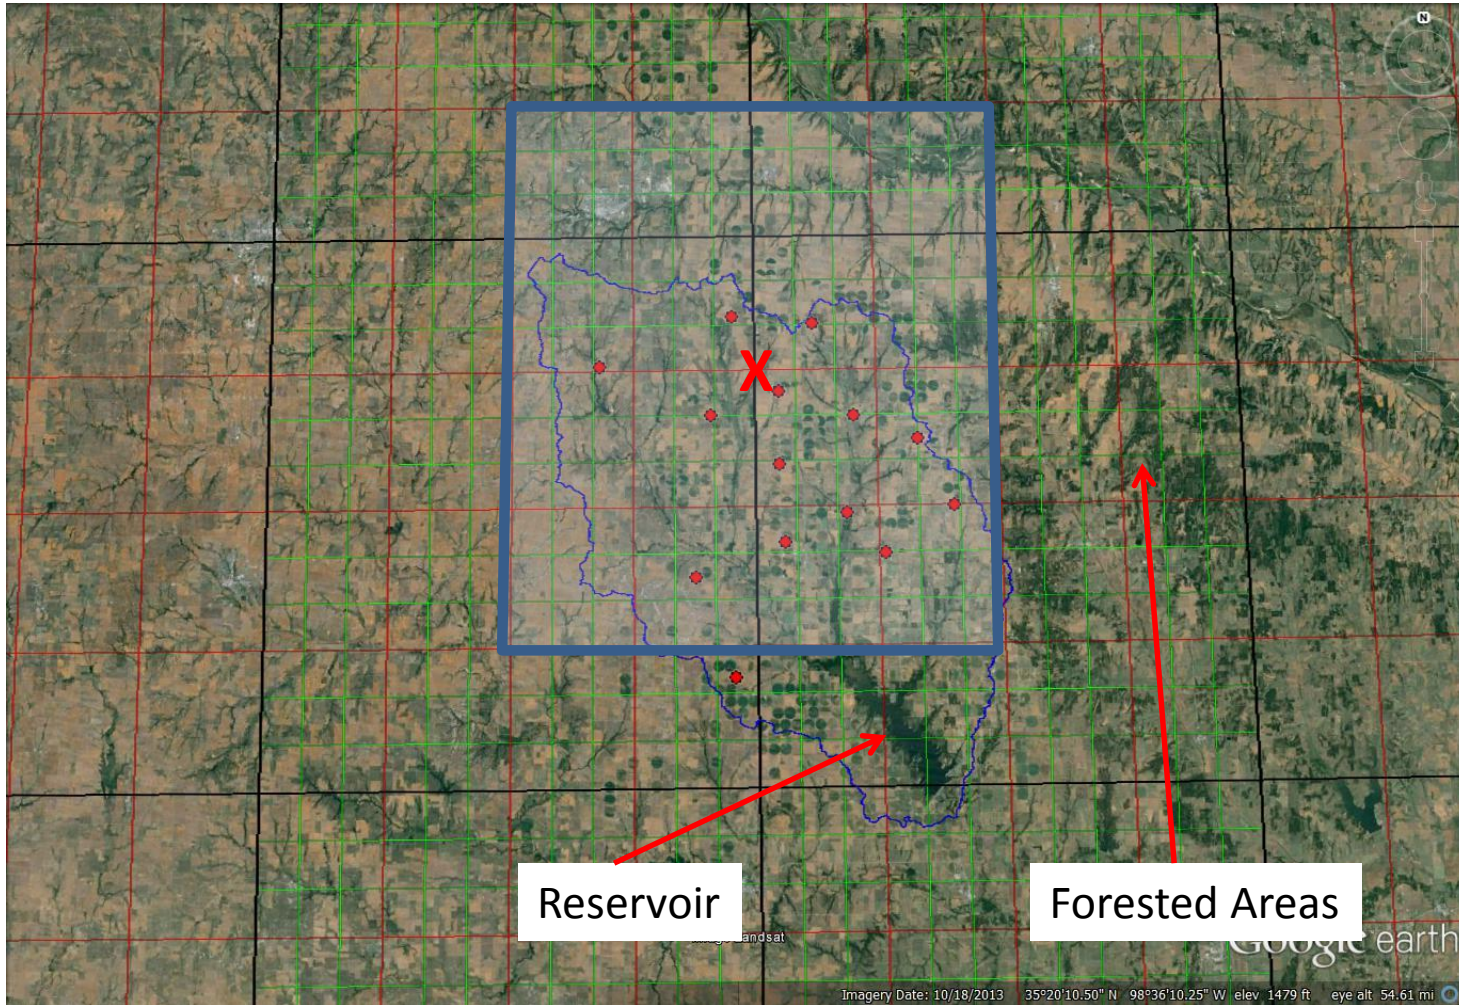

- 36 kmEZ2
- 9 km EZ2
- 3 km EZ2
- FC watershed
- *In situ* sites
- X Grid Center

Reservoir

Forested Areas

Fort Cobb Watershed

- 36 km EZZ
- 9 km EZZ
- 3 km EZZ
- FC watershed
- *In situ* sites
- X Grid Center

Reservoir

Forested Areas

TxSON (Core Pixel)

Yanco (Core Pixel)

Fort Cobb (Core Pixel)

Little River (Core Pixel)

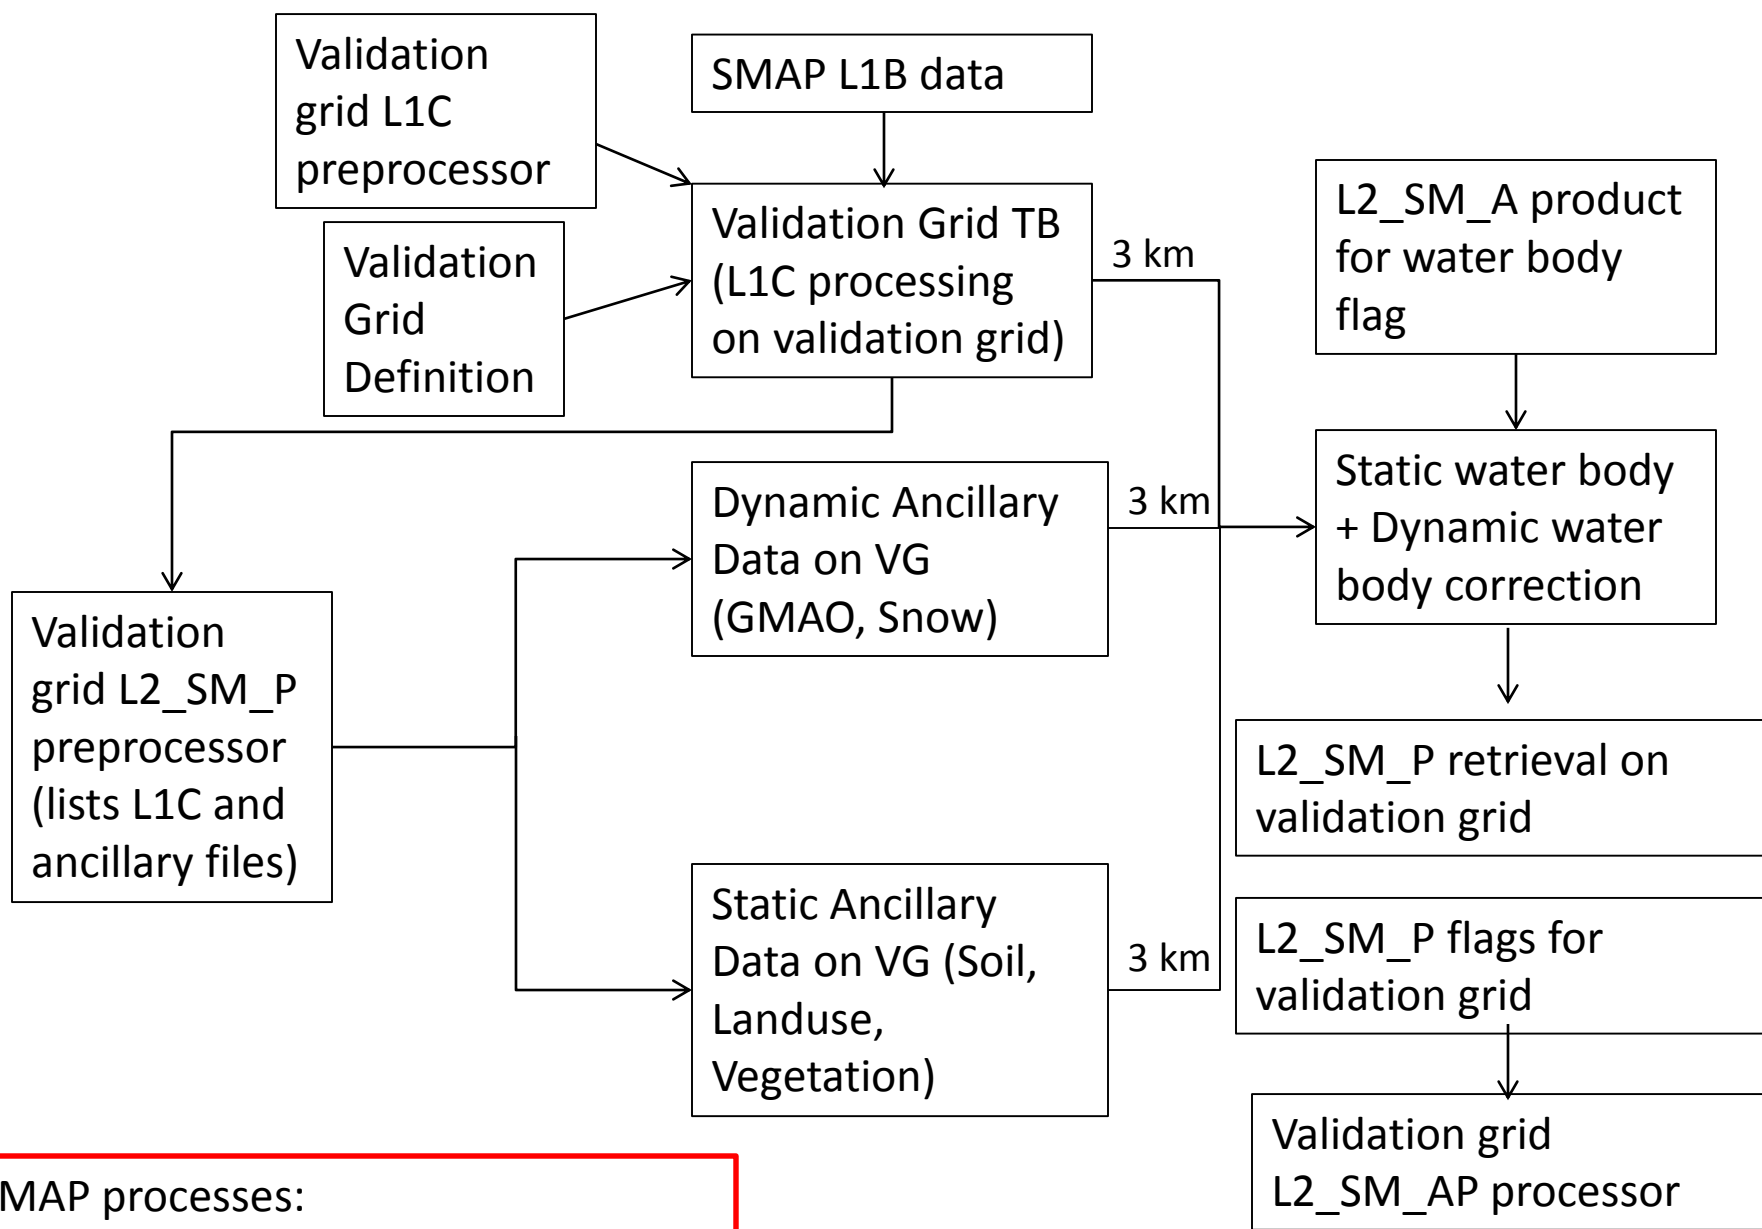

Fort Cobb Watershed - Methodology

- 36 km EZ2
- 9 km EZ2
- 3 km EZ2
- FC watershed
- *In situ* sites
- X Grid Center

Validation Grid - Methodology

- SMAP Grid: No overlap between adjacent grid cells
 - Grid resolution – 36 km
 - Grid spacing – 36 km
- Validation Grid: Significant overlap between adjacent grid cells
 - Grid resolution – 36 km
 - Grid spacing – 3 km
- L2_SM_P Validation grid – 144 (12x12) times operational grid
- Max. geographical mismatch with *in situ* observations
 - SMAP grid – 75%
 - Validation grid – 8.33%

SMAP processes:
 L1B -> L1C processing
 Processing and gridding ancillary data
 L2_SM_P processing

Baseline and Option Algorithms

Algorithms	Status	Input Fields	Output Field(s)
SCA-H	Baseline	TBH, soil temperature, soil texture, NDVI	Soil moisture
SCA-V	Option	TBV, soil temperature, soil texture, NDVI	Soil moisture
DCA	Option	TBH, TBV, soil temperature, soil texture	Soil moisture, tau
MPRA	Option	TBH, TBV, soil temperature, soil texture	Soil moisture, tau

Validation Grid product

- Builds on the operational SMAP code
- Minimal changes to the individual modules
 - Critical for ensuring both operational and validation processors use the same code/rules
- Possible to verify the consistency between the operational and validation grid outputs
- VG is run on a continuous basis and provides the data for SMAP L2SMP cal/val analysis

Climate class: Temperate (Cfa)

Landcover: Grasslands

TxSON (Candidate Pixel)

L2_SM_P-BL (T11880-999): 4801-36-01 (TxSON) (30.31, -98.78; 218, 101)

Soil texture:

S-%: 33

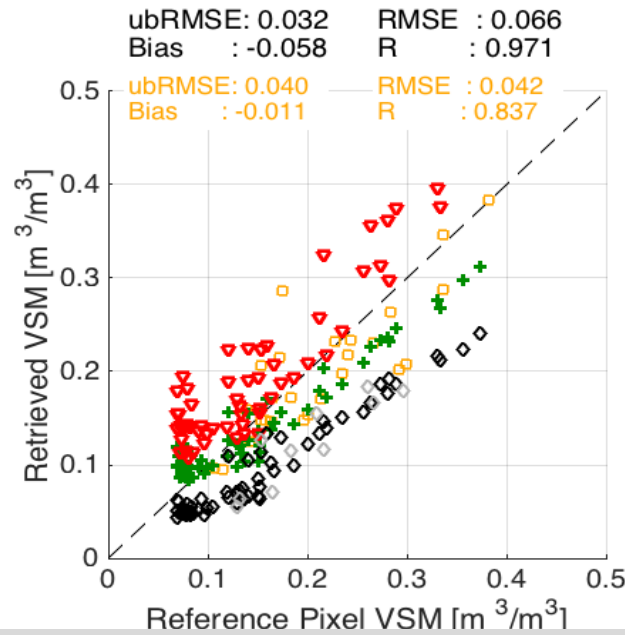

C-%: 33

BD: 1.42
